

MOHAMMED JUNAID.VP

Full Stack Developer

mohammed.junaid.software@gmail.com | 7736355958 | Portfolio | LinkedIn | GitHub | LeetCode | India

PROFILE SUMMARY

Full Stack Developer with production experience building and deploying AI-powered SaaS applications on AWS. Designed and shipped SkillForge AI — a complete technical interview platform with real-time WebRTC video, Socket.io, AI evaluation via Groq (Llama 3.3 70B), in-browser malpractice detection using Google MediaPipe, Monaco code editor, RabbitMQ task queues, and automated CI/CD via GitHub Actions. Comfortable working across the full stack — from React UI to Node.js APIs, PostgreSQL schema design, Redis caching, Docker containerization, and cloud infrastructure on AWS EC2, RDS, ElastiCache, and ECR. Driven by real problems, systems thinking, and shipping things that actually work in production.

SKILLS

Languages

- JavaScript, TypeScript, HTML, CSS

Frontend

- React.js, Next.js, Tailwind CSS, Redux, React Query, Zod, Vite

Backend

- Node.js, Express.js, Socket.io, WebRTC, REST APIs, JWT, Stripe, Nodemailer, Multer

Databases

PostgreSQL, MongoDB, Prisma ORM, Redis

Cloud & DevOps

- Docker, AWS (EC2, RDS, ElastiCache, ECR), Nginx, GitHub Actions, Vercel

AI & Tools

Groq AI, Google MediaPipe, RabbitMQ, Cloudinary, Judge0, Git, Postman

Soft Skills

Problem Solving, Debugging, Analytical Thinking, Team Collaboration, Communication, Time Management

PROJECTS

SkillForge AI — AI-Powered Technical Interview Platform | Live [🔗](#)

- Built a production SaaS platform enabling non-technical HR professionals to conduct complete AI-evaluated technical interviews without requiring a second technical interviewer.
- Implemented dual WebRTC (PeerJS) peer connections — camera feed and screen share run simultaneously; HR views developer face and screen at the same time with zero server relay.
- Integrated Groq AI (Llama 3.3 70B) for resume parsing, automatic generation of 15 role-specific interview questions, real-time answer evaluation (score 0–10 with feedback), and take-home task code review.
- Built 3-layer AI proctoring system: Google MediaPipe FaceLandmarker (face/head/eye detection), MediaPipe ObjectDetector (phone/book/extra device detection), and browser event listeners — all running locally in-browser with zero video stored on server.
- Embedded Monaco Editor (VS Code engine) inside the interview room with Judge0 CE code execution — video call stays live while developer codes; HR watches run results in real time via Socket.io.
- Implemented RabbitMQ message queue (CloudAMQP) for async AI task evaluation with retry logic (3 attempts, exponential backoff) and inline fallback if queue is unavailable
- Designed progressive malpractice warning system: 3/5/7 warning points trigger First/Second/Final warnings; 8+ points Hr Can Suspend interview and updates DB status via Prisma.

- Built magic link authentication for developers using `crypto.randomBytes(32)` with Redis — zero registration, zero password required for candidates.
- Integrated Stripe Checkout with webhook validation for Free (5 interviews/month) and Pro (unlimited) subscription plans with interview limit enforcement.
- Deployed on AWS: EC2 (Dockerized backend + Nginx + SSL), RDS (PostgreSQL), ElastiCache (Redis), ECR (Docker registry). GitHub Actions CI/CD pipeline auto-deploys on git push with zero-downtime container swap

Stack: React · Node.js · TypeScript · PostgreSQL · Redis RabbitMQ · WebRTC · Socket.io · Vercel · AWS · Docker

FEATHER MOUND — E-Commerce Web Application | Live [↗](#)

- Designed and developed a scalable full-stack e-commerce platform using MERN stack.
- Built RESTful APIs for CRUD operations including users, products, cart, and orders.
- Implemented authentication and authorization using JWT (access and refresh tokens) and Bcrypt.
- Integrated Razorpay payment gateway for secure online transactions.
- Applied MVC architecture and modular folder structure for maintainable backend development
- Deployed the frontend on Vercel and the backend on AWS, using MongoDB Atlas as the cloud database.
- Optimized API performance and improved application scalability

Stack: React · Node.js · MongoDB · Express.js · JWT · Razorpay · Vercel · AWS

ScrapLink — Scrap Collection Platform (Ongoing — Freelance Client Project)

- Developing a full-stack scrap marketplace (React, Node.js, TypeScript, PostgreSQL) connecting Kerala households and shops with verified collectors, eliminating middlemen via a dual-tier pricing system (Home vs Shop Owner rates) and GPS-based pickup scheduling.
- Architecting a modular monolith backend (Express, Prisma ORM, Redis) with microservices-ready module separation (Auth, Orders, Catalog, Payments, Admin), MSG91 WhatsApp OTP authentication, JWT + httpOnly cookies, and role-based access control for 4 user roles.
- Implementing radius-based pickup routing to nearest collectors, 7-day SLA monitoring with automated admin alerts, Razorpay payment integration (phase-gated via admin toggle), and webhook-driven order status updates.
- Planning deployment on AWS (EC2 + Docker + Nginx + SSL), Vercel (frontend), RDS PostgreSQL, ElastiCache Redis, with GitHub Actions CI/CD pipeline and zero-downtime container swaps.

Stack: React · Node.js · TypeScript · PostgreSQL · Redis · MSG91 · Razorpay · AWS · Docker · Nginx

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | Bridgeon Solutions

- Developed and deployed full-stack web applications using React.js, Node.js, Express.js, PostgreSQL, and MongoDB across multiple production projects.
- Built and integrated RESTful APIs with JWT authentication, Bcrypt hashing, input validation, and error handling.
- Implemented real-time features using Socket.io and WebRTC for live communication and data synchronization.
- Worked with both relational and non-relational databases — PostgreSQL with Prisma ORM and MongoDB with Mongoose — including schema design and query optimization.
- Containerized applications using Docker and deployed on AWS EC2 with Nginx reverse proxy and SSL configuration.
- Built and maintained CI/CD pipelines using GitHub Actions for automated testing and zero-downtime deployments.
- Integrated third-party services including Stripe payments, Razorpay, Cloudinary, and Nodemailer across different projects.
- Used Redis for session management and caching, and RabbitMQ for async job processing and message queuing.

EDUCATION

Higher Secondary (Bio Science), Chandan Brothers Higher Secondary School [↗](#)

06/2023 – 04/2025

Bachelor of Computer Applications, Manipal University [↗](#)

08/2025 – Present
